

# **ELECTRONIC DOCUMENT MANAGEMENT SYSTEM FOR THE CONSTRUCTION INDUSTRY**

## **Abstract of the Disclosure**

Embodiments of the invention include a document management system for the construction industry that organizes projects into accessible documents in an online computer network, such as the Internet, or computer readable media, such as an optical disk or other media. In one embodiment, the system includes a software utility for generating job-specific websites. Subcontractors, vendors, and the like, accessing the website can gather information useful in the submission of construction bids to the general contractor for all or a portion of the construction.
